

Best Practices for Applying 19.0.0.x Upgrades for Programmability Essentials and Plug-ins

Overview

The following notes provide guidance in applying 19.0.0.x upgrades for Programmability Essentials (Python and R) and Programmability Plug-ins (.NET).

Note: For detailed installation instructions for Programmability Plug-ins/Essentials for 19.0.0.x, please visit <http://www.spss.com/devcentral/index.cfm?pg=articleDet&artId=8>

Best Practices for 19.0.0.0 Plug-in/Essentials Users:

19.0.0.0 Plug-in/Essentials users are defined as users who installed IBM SPSS Statistics 19.0.0.0 or IBM SPSS Statistics Server 19.0.0.0 with any one of the following:

- IBM SPSS Statistics - Essentials for Python or R 19.0.0.0
- IBM SPSS Statistics - Integration Plug-In for Microsoft _NET 19.0.0.0

Recommendation:

Python and R Users

On Windows, you will need to uninstall the existing version of Python or R Essentials before installing a newer version. It is recommended to upgrade IBM SPSS Statistics 19.0.0.0 with IBM SPSS Statistics 19.0.0.1 before installing the 19.0.0.1 version of Python or R Essentials, although the 19.0.0.1 version of Python or R Essentials will work with either IBM SPSS Statistics 19.0.0.0 or the 19.0.0.1 patch.

On Mac, Linux, and UNIX, it is recommended to uninstall existing versions of the Python or R Plug-ins before installing newer versions of Python or R Essentials. Also, it is recommended to upgrade IBM SPSS Statistics 19.0.0.0 with IBM SPSS Statistics 19.0.0.1 before installing the 19.0.0.1 version of Python or R Essentials.

VB.Net Users

You will need to uninstall the existing version of the .Net Plug-in before installing a newer version. Also, it is recommended to upgrade IBM SPSS Statistics 19.0.0.0 with IBM SPSS Statistics 19.0.0.1 before installing the 19.0.0.1 version of the .Net Plug-in, although the 19.0.0.1 version of the .Net Plug-in will work with either IBM SPSS Statistics 19.0.0.0 or the 19.0.0.1 patch.
